

## PRESS RELEASE 23 JANUARY 2019

### **Italeaf: Numanova obtains EN ISO 9001:2015 certification for the production of ferrous and non-ferrous metal powders for special applications**

**Numanova**, an **Italeaf Group company** specialised in the production of metal powders used as raw materials in additive manufacturing (or 3D printing), announces that it has obtained from TUV Austria Group the certification of the **production of ferrous and non-ferrous metal powders for special applications**, according to the international standard **UNI EN ISO 9001:2015**, that defines the requirements of quality management systems and allows organizations, on a voluntary basis, to submit to verification, by an accredited certification body, its quality system and its production processes.

The project for the certification of commercial services began with the start of production and, through a process of analysis and verification, has led to the definition of internal procedures aimed at ensuring the proper execution of operational activities and compliance with legal and industry regulations, with the ultimate goal of ensuring customer satisfaction.

The application of the standard guarantees, in fact, that all production processes are carried out according to specific standards and that all phases of the activities are controlled and verifiable, with continuous monitoring and improvement of the service, to ensure greater reliability and efficiency both internally and towards customers.

"We are particularly proud to have obtained this certification that covers all aspects of production - said the CEO of Numanova, **Corrado Giancaspro** -. This is a new and important recognition for our company, which is now taking off in an innovative sector such as 3D printing and new materials. Through certification, we demonstrate our ability to monitor internal processes and constantly improve performance, in order to offer increasingly high quality services".
