

Joint Press Release

Milan, 5 October 2020

algoWatt and Caronte&Tourist: "Successfully completed the first phase of the automation project of the ticketing terminal of Villa San Giovanni"

- Approximately 1.5 million vehicles, including cars and commercial vehicles, and more than 3.5 million passengers transited
- The new toll and embarkation system has contributed to increase social distancing and to safely manage boarding traffic for Sicily during the COVID19 emergency

algoWatt, GreenTech Solutions company listed on Borsa Italiana's electronic stock exchange (MTA), and **Caronte & Tourist**, a leading company in maritime connections between Sicily and its minor islands (but also operating routes on the Strait of Messina and Sardinia, also connecting - through CarTour - Sicily and Naples), point out the first phase, virtually completed, of the wider project of digital reorganization of the activities of the C&T Ticketing Terminal located near the freeway junction of Villa San Giovanni.

Since the activation of the automation system on September 30, 2020, about 1.2 million cars, more than 250 thousand commercial vehicles and more than 3.5 million passengers have passed through the port of Villa San Giovanni. These are flattering numbers, which highlight the perfect operation of a completely new system and yet already fully operational.

*"The automation of the former Villa Agip terminal of Villa San Giovanni - said **Vincenzo Franza**, CEO of **Caronte & Tourist Group** - as well as speeding up and streamlining the ticketing procedures has allowed us to increase passenger security in order to contain the spread of the COVID-19 virus, reducing opportunities for interpersonal contact and optimize the use of resources and management costs".*

Laura Bizzarri, managing director of **algoWatt**, stated: *"For algoWatt this is a highly qualifying project, which will represent a reference standard for the automation of ticketing and traffic management services for quay access and embarkation traffic in all national port facilities. The work done for Caronte & Tourist represents a practical example of the contribution that digitization can bring to the efficiency of transport services and tourist mobility, as well as to the safety and health of passengers. algoWatt has provided the turnkey system including design, purchase from third parties, installation, integration and activation of the system and testing, training courses for Caronte personnel. We also continue to serve the shipping company with the operational maintenance of the system".*
